

# GEFRAN

## Panel Mount "Hockey Puck" Relays and DIN Rail Mounted Solid State Relays up to 120 Amps

With over forty years of experience, Gefran is the world leader in the design and production of solutions for measuring, controlling, and driving industrial production processes. Gefran's know-how and experience guarantee continuity and tangible solutions. Gefran's line of solid state relays are the ideal solution for applications where high speed switching and long life are essential. In specific applications, solid state relays offer many advantages over electromechanical devices including no moving parts or contact arcing. In addition, solid state relays are directly compatible with logic components such as microprocessors and PLCs.

feature is important in certain medical, residential and industrial applications. The Gefran solid state relays also include built-in metal oxide varistor (MOV) protection to protect against internal damage to the solid state relay.

### Output Circuit Features

The Gefran solid state relays feature zero voltage turn-on, which means they are designed to turn on at the next zero crossover after application of the control voltage. This limits electromagnetic interference, reducing the chance of damage to downstream equipment. A built-in MOV reduces the likelihood of damage to the relay from rapid changes in voltage (dv/dt) and transient voltages.

### Many safety and convenience features

All Gefran solid state relays come standard with an LED to indicate when the relay is in an operational state. This increases safety and speeds troubleshooting.

In addition, all GQ hockey puck type relays come standard with a load side cover that provides touch protection. The GTS DIN-Rail mounted relays also offer touch protection through the use of a removable protective cover plate.

### Broad selection for many applications

The Gefran GQ solid state relays are available in single phase "hockey puck" models up to 90 amps and the GTS DIN-rail single phase units with integral heatsink up to 120 amps. The GTZ three phase models with integral heatsink up to 55 amps are also available.

### Opto-isolated input limits current leakage

All Gefran solid state relays feature opto-isolated inputs where an internal LED signals a photosensitive element when output switching is to occur. This provides up to 4,000V isolation between the input voltage and the output voltage and also limits current leakage. This

### Common Applications

- Heating controls
- Injection molding machines
- Semiconductor manufacturing equipment
- Glass processing
- Welding controls
- Food processing
- Industrial & commercial ovens
- Soldering machines
- Medical equipment
- Office machinery
- Robotics

### Integral heatsink with DIN-rail mounting

A complete selection of solid state relays are available with a built-in heatsink (GTS/GTZ models). This eliminates the hassle of selecting and installing a properly sized heatsink, or mounting to a panel mount relay directly on the back pan with silicone thermoconductive grease.

### Approvals

The Series GQ and GTZ solid state relays are cURus approved and CE marked. The GTZ DIN-rail solid state relays are cULus Listed and CE marked.

- ❶ Finger Safe Protection Covers
- ❷ AC or DC Input Connections
- ❸ AC Output Connection Models
- ❹ LED Status Indicator
- ❺ Internal MOV protection
- ❻ Integrated or optional heatsinks
- ❼ cURus, CE
- ❽ cULus, CE

### Catalog Number Quick Guide

**GQ- 15 - 24 - D - 1 - 4**

**General Application Notes**

**Heatsinks**

Different models of heatsinks have been designed and tested to meet size and dimension needs.

**How to choose a heatsink**

- Set max. air temperature inside the panelboard ( $T_{max_a}$ )
- Set max. operating current:  $I_{max} = I_{nom. load} + 10\%$
- Draw on the “graphs”  $T_{max_a}$ ,  $I_{max}$  points.
- Choose the smallest heatsink (starting from upwards), which point [ $T_{max_a}$ ,  $I_{max}$ ] is in the gray working area of dissipation curves
- Respect installation distances

**Installation**

In order to obtain best reliability, it is important to install a heatsink correctly inside the panel, to reach an adequate thermal exchange between the device and the surrounding air in natural convection conditions.

**How to install it correctly:**

Mount it vertically ( max. 10° inclination from the vertical axis)

- Vertical distance between a heatsink and the panel wall: 100 mm at least.
- Horizontal distance between a heatsink and the panel wall: 20 mm at least.
- Vertical distance between two heatsinks: 300 mm at least.
- Horizontal distance between two heatsinks: 40 mm at least.

Check that cable channels do not reduce these distances; should it happen, mount the relays overhanging from the panel, so that the air can flow vertically on the heatsink without obstacles (see Fig.1).

**Fig. 1**

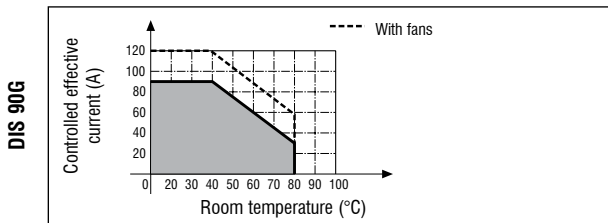

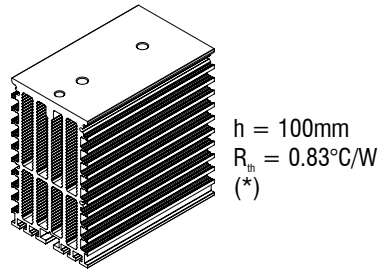

**G**  
**Gefran Solid State Relays**

**General Application Notes** *(continued)*

**Dissipation Curves**

Effective current controllable based on room temperature

**G**  
**Gefran Solid State Relays**

**General Application Notes (continued)**

**Varistors (MOV)**

If your application is located near inductive loads, or shares power sources with large inductive loads that are creating transients in excess of the blocking voltage of the Gefran solid state relay, then you must install a metal oxide varistor (MOV) to protect the solid state relay. It is up to the installation company to properly size the MOV to the application! Ideally, the MOV protection is near the noise generating inductive load (such as a motor, drive, or other large inductive coil) or you can place MOVs directly across the output terminals of the SSR.

**Recommended MOVs from EPCOS:**

Part Number	Working Voltage (V)
S20K300	120-290 V AC
S20K420	291-400 V AC
S20K510	401-500 V AC

The Gefran solid state relays include technology that dramatically reduces your need to install an external MOV except in extremely noisy environments or inductive load applications.

**Fuses and Fuse Holders**

These fuses ensure the maximum safety in solid state relay applications. Fuses with a very high cutoff power are used for this kind of applications. See Table 1.

**Table 1.**

Recommended Fuses (by others) for GQ, GTS & GTZ Relays					
Type relay	i <sup>2</sup> t	Nominal voltage	Size	Dimensions (mm)	Bussman Part No.
GQ 15A	450	230 480	16A	10x38	FWC16A10F

**G**  
Gefran Solid State Relays

**General Application Notes** (continued)

**Series GQ Installation notes**

- The heat sink must be grounded.
- Power controllers are designed to assure a switching function that does not include protection of the load line or of devices connected to it. The customer must provide all necessary safety and protection devices in conformity to current electrical standards and regulations.
- Protect the solid state relay by using an appropriate heat sink (accessory). The heat sink must be sized according to room temperature and load current.

**Dissipated Power Calculation**

Single-phase relay

$$Pd \text{ GQ..15/25} = 1.45 * IRMS \text{ [W]}$$

$$Pd \text{ GQ..50/90} = 1.35 * IRMS \text{ [W]}$$

IRMS = single-phase load current

**Heatsink Thermal Resistance Calculation**

$$R_{th} = (90^{\circ}\text{C} - \text{max amb. T}) / Pd$$

- where Pd = dissipated power
- Max. amb. T = max air temperature inside the electrical cabinet.

Use a heatsink with thermal resistance inferior to the calculated one (Rth).

Maximum surrounding air temperature 40°C suitable for use in pollution degree 2 or better.

**Procedure for mounting on heat sink:**

The module-heat sink contact surface must have a maximum planarity error of 0.05mm. and maximum roughness of 0.02mm. The fastening holes on the heat sink must be threaded and countersunk.

Attention: spread 1 gram of thermoconductive silicone (we recommend DOW CORNING 340 HeatSink) on the dissipative metal surface of the module. The surfaces must be clean and there must be no impurities in the thermoconductive paste. As alternative it is also possible to use the graphite film SIL-GQ available as accessory.

- Alternately tighten the two fastening screws until reaching a torque of 0.4...0.6 Nm. Wait 5 minutes for any excess paste to drain.
- Alternately tighten the two fastening screws until reaching a torque of 1.2...1.4 Nm.

**Installation on heatsink:**

**General Application Notes (continued)**

**Series GTS Installation notes**

Power controllers are designed to assure a switching function that does not include protection of the load line or of devices connected to it. The customer must provide all necessary safety and protection devices in conformity to current electrical standards and regulations.

To assure maximum reliability, it is essential to install the unit correctly in the panel in order to guarantee adequate heat exchange between the heat sink and the room under natural convection conditions.

Maximum surrounding air temperature 40°C “Open Type Equipment” suitable for use in pollution degree 2 or better.

Install the unit vertically (max 10° inclination from vertical axis).

- Vertical distance between unit and panel wall >100 mm
- Horizontal distance between unit and panel wall at least 20 mm
- Vertical distance between one unit and the next at least 300 mm
- Horizontal distance between one unit and the next at least 20 mm

Make sure that the wire raceways do not reduce such distances. If they do, install the units cantilevered to the panel so that air can flow vertically onto the heat sink without obstruction.

**Equipment should be short circuit protected by semiconductor fuse type:**

Model	Fuse manufacturer	Fuse Model size
GTS 15/230	Bussmann Div Cooper (UK) Ltd	FWC16A10F 10x38

GTS 120/230, GTS 120/60	Bussmann Intn'l Inc. USA	170M1418 000- TN/80

**Series GTZ Installation notes**

Power controllers are designed to assure a switching function that does not include protection of the load line or of devices connected to it. The customer must provide all necessary safety and protection devices in conformity to current electrical standards and regulations.

To assure maximum reliability, it is essential to install the unit correctly in the panel in order to guarantee adequate heat exchange between the heat sink and the room under natural convection conditions.

Install the unit vertically (max 10° inclination from vertical axis).

- Vertical distance between a heatsink and panel wall >100 mm
- Horizontal distance between a heatsink and panel wall at least 20 mm
- Vertical distance between two heatsink at least 300 mm
- Horizontal distance between two heatsink at least 20 mm

Make sure that the cable raceways do not reduce such distances. If they do, install the GTZ overhanging from the panel, so that the air can flow vertically on the heatsink without obstruction.

**Warnings**

During continuous operation, the heat sink can reach very high temperatures, and keeps a high temperature even after the unit is turned off due to its high thermic inertia.

DO NOT work on the power section without first cutting out electrical power to the panel.

Follow the instructions in the technical manual.

Class		A (industrial device)				

### Dissipation Curve

GTZ 25 - 40 - 55

### Technical Information

#### Terminals and Conductors

Size	Nominal Section Cable mm <sup>2</sup>	Control Terminal (A1, A2, B1, B2)			Power Terminal (L1, L2, L3, T1, T2, T3)			Ground Terminal ①	
		Contact area (WxD) screw type	Type of preisolated terminal	Section conductor tightening torque ②	Contact area (WxD) screw type	Type of preisolated terminal	Max. section conductor tightening torque	Contact area (WxD) screw type	Max. section conductor tightening torque
25A	6	6.3x9 M3	Eye / fork / tip	min. 0.35 mm <sup>2</sup> max. 2.5 mm <sup>2</sup> 0.6 Nm Max	12 x 12 M5	Eye / fork / tip	<i>Tip Terminal</i> min. 1mm <sup>2</sup> (17AWG) max. 10mm <sup>2</sup> (7AWG)  <i>Eye or Fork Terminal</i> min. 1mm <sup>2</sup> (17AWG) max. 16mm <sup>2</sup> (5AWG)  1.5 ... 2.2Nm	12x12 self-tapping screw 3.9x12 DIN7981	min. 1mm <sup>2</sup> (17AWG) max. 16mm <sup>2</sup> (5AWG) 1.5 ... 1.8Nm
40A	10								
55A	16							12x12 M5	min. 1mm <sup>2</sup> (17AWG) max. 16mm <sup>2</sup> (5AWG) 2.5Nm

① Note: The maximum sections specified refer to unipolar copper wires isolated in PVC. For the ground terminal, a eye wire terminal is required.  
(WxD) = Width x depth

② The minimum acceptable nominal section based on the nominal currents of the power solid state units is given for copper conductors isolated in PVC, under continuous operating conditions and at 40°C ambient temperature according to standards CEI 44-5, CEI 17-11, IEC 408 in accordance with EN60204-1.

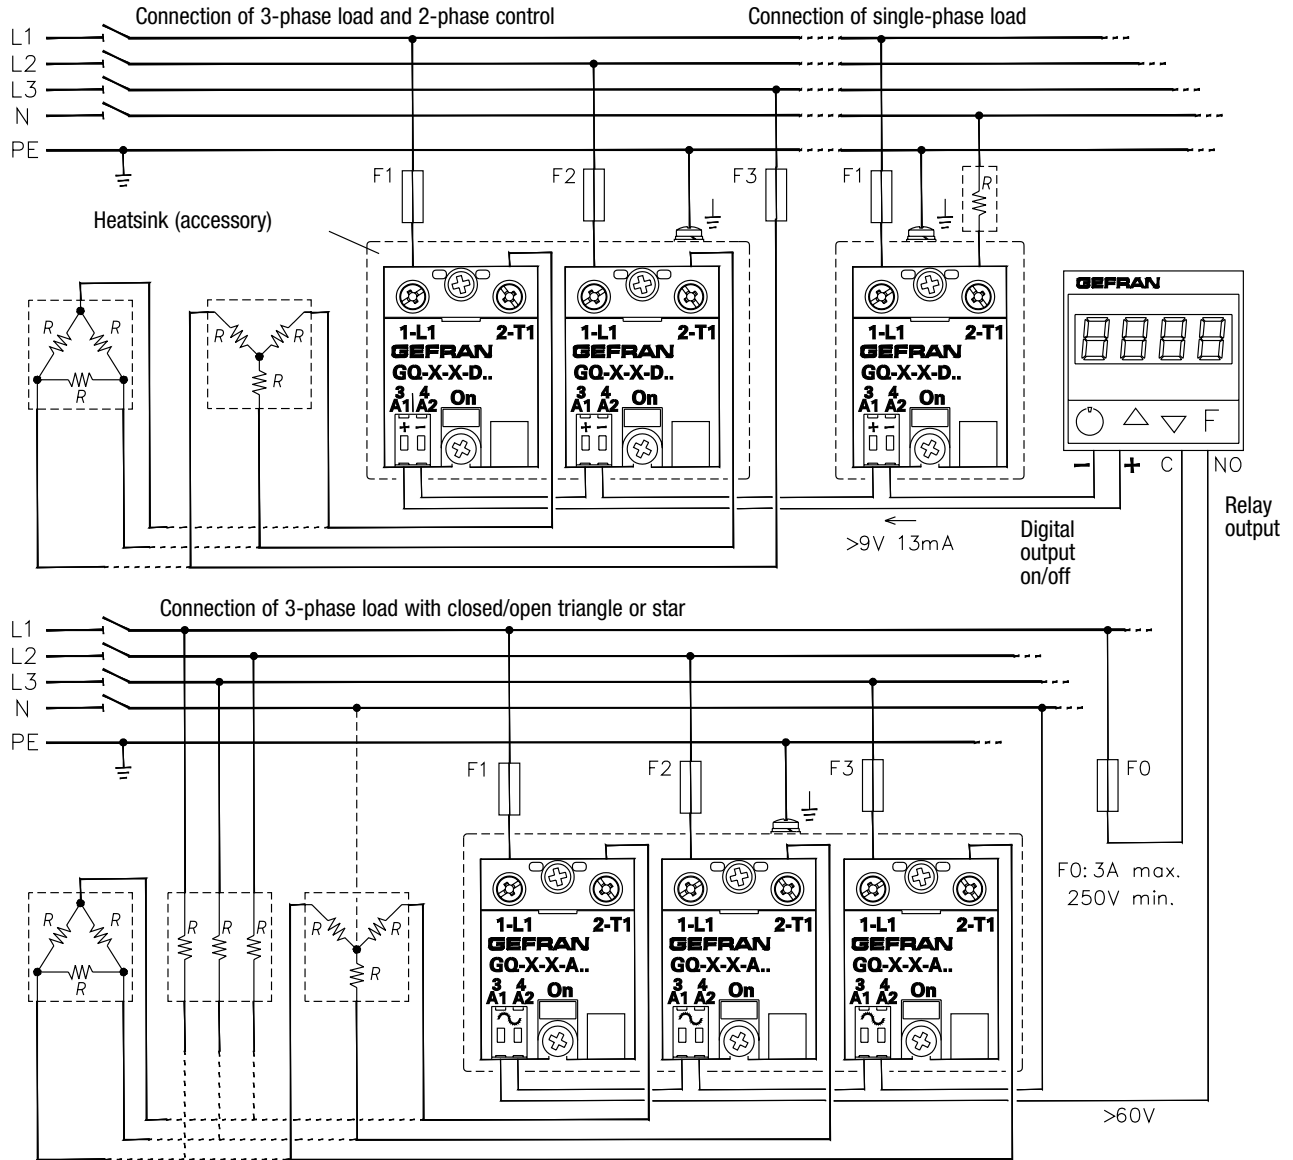

G  
Gefran Solid State Relays

#### Connection Examples

- L1 : Phase 1 input
- L2 : Phase 2 input
- L3 : Phase 3 input
- T1 : Phase 1 output
- T2 : Phase 2 output
- T3 : Phase 3 output
- A1 : Control signal (+)
- A2 : Control signal (-)
- B1 : Alarm output (+) (Special unit)
- B2 : Alarm output (-) (Special unit)
- Led1: Red led signal indicator
- Led2: Yellow led (alarm overtemperature junction)

**Series GQ Solid State Relays**

**G** Gefran Solid State Relays

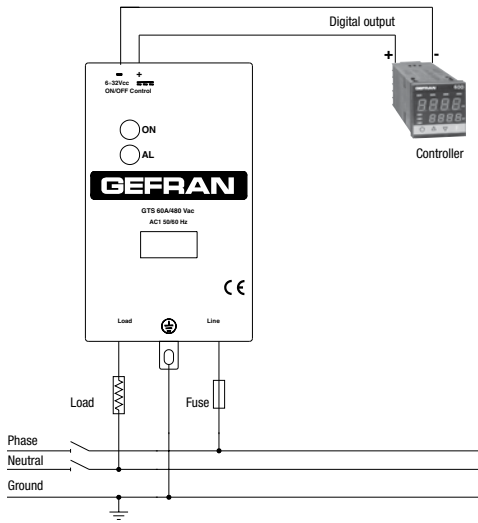

**Series GQ Fuse Connections**

The solid state group must be connected using proper fuses against short circuits

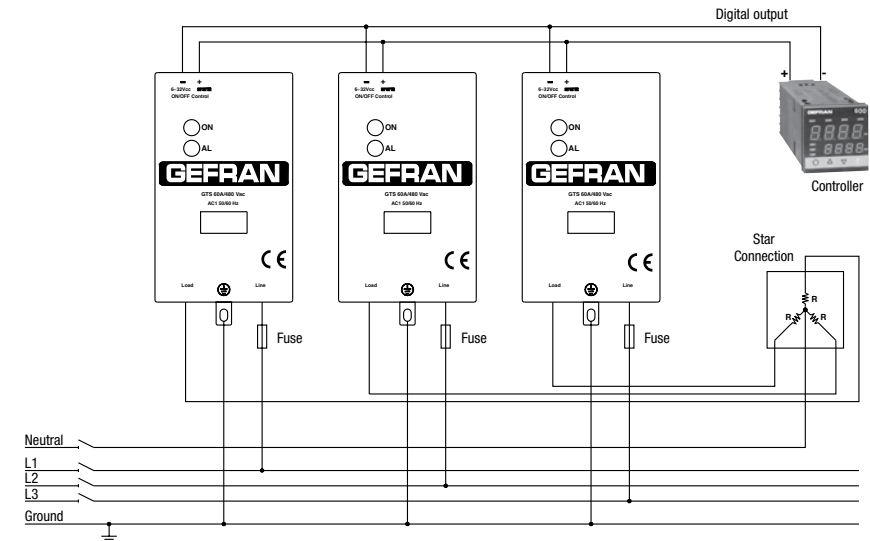

**Series GTS Solid State Relays**

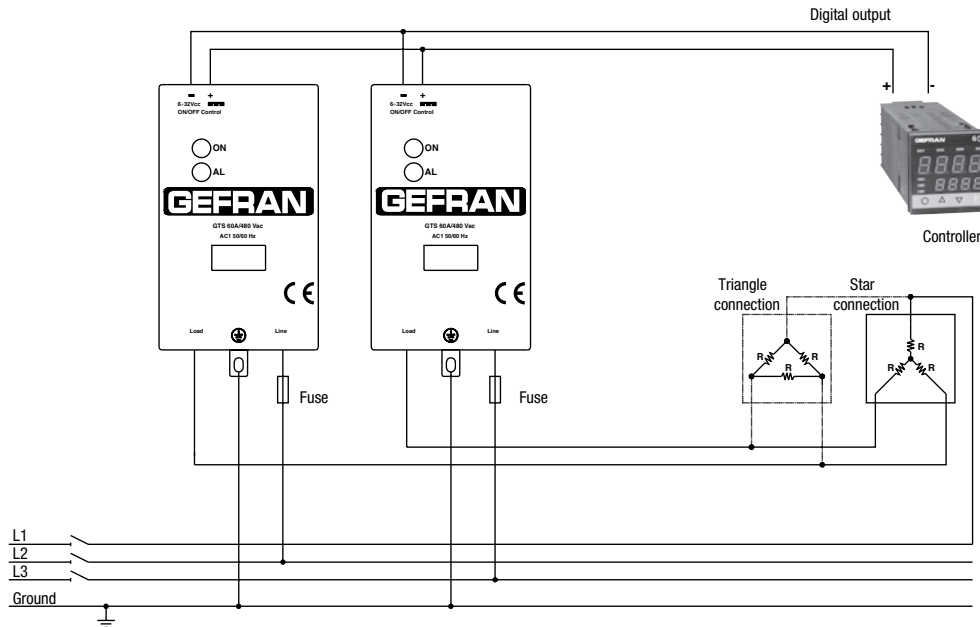

Single-phase connection

Three-phase Star connection with neutral

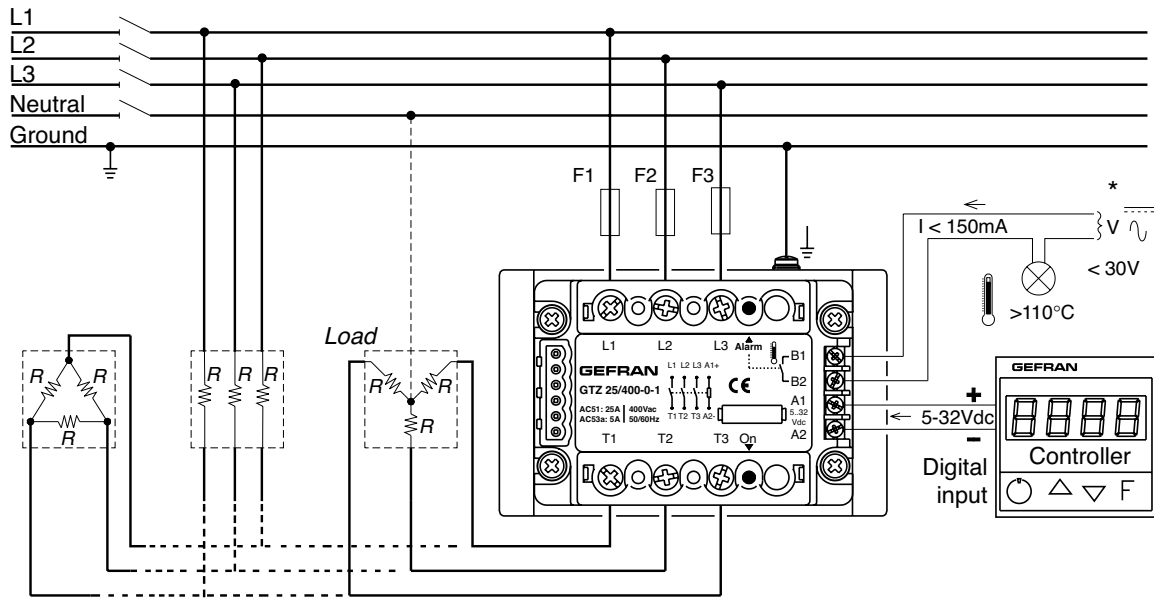

Three-phase Triangle or Star connection without neutral on two phases

**G** GEFran Solid State Relays

**Series GTZ Solid State Relays**

Three-phase Triangle or Star connection (with and without neutral)

\* Only in the version with option overtemperature alarm output

**GQ Panel Mount Relays**

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

(\*) See installation notes

\*Apply thermoconductive paste

Raise the guard to access the fastening hole or the terminals

**GTS 1-Pole DIN-Rail Mount Relays**

Dimensions are in millimeters (inches). Dimensions not intended for manufacturing purposes.

**PAN-1 Panel Mount Accessory for GTS - Hole Template**

GTS 1-Pole Relays	Length	Width
	mm (inches)	mm (inches)
GTS-15...25	112 (4.41)	0 (0.00)
GTS-40	112 (4.41)	25 (0.98)
GTS-50...60	112 (4.41)	44 (1.73)
GTS-90...120	112 (4.41)	113 (4.45)

**G**  
Gefran Solid State Relays

**GTZ 3-Pole DIN-Rail Mount Relays**
